World Without Cancer - The Story Of Vitamin B17

Synopsis

This is the soundtrack of a film based on his book of the same title, which marshals the evidence that cancer, like scurvy or pellagra, is primarily a deficiency disease caused by the lack of an essential food factor missing from modern man's diet. That substance is vitamin B17. In its purified form developed for cancer therapy, it is known as Laetrile. This story is not approved by orthodox medicine. The FDA, the AMA, and The American Cancer Society have labeled it fraud and quackery. Yet the evidence is clear that here, at last, is the final answer to the cancer riddle. Why has orthodox medicine waged war against this non-drug approach? The author contends that the answer is to be found, not in science, but in politics - and is based upon the hidden economic and power agenda of those who dominate the medical establishment. With billions of dollars spent each year on research, with other billions taken in on the sale of cancer-related drugs, and with fund-raising at an all-time high, there are now more people making a living from cancer than dying from it. If the solution should be found in a simple vitamin, this gigantic industry could be wiped out over night. The result is that the politics of cancer therapy is more complicated than the science.

Customer Reviews

Though I know Griffin is a credible researcher, I nonetheless tracked down several cancer survivors who have used laetrile to cure their condition, and vitamin distributors who have had B-17 seized by the FDA. There is no substitute for primary sources, and those I interviewed substantiated Griffin's main claims. Individuals unfamiliar with B-17's remarkable results often scoff at such alternative medical "lunacy". Two caveats may aid the hard-nosed skeptic. As Griffin admits candidly, B-17 isn't a magic cure-all; it is a key component in a holistic regimen that requires serious lifestyle changes and genuine sacrifice. The mere fact that the FDA outlawed laetrile is not *prima facie* proof that it

fails to cure cancer; an open minded individual might ask, "Does scientific evidence proving that laetrile cures cancer exist?" Griffin provides this evidence. His thesis is that cancer is a vitamin deficiency disease analogous to scurvy and that mainstream "treatments" such as chemotherapy, radiation, and surgery are quackery analogous to colonial bloodletting. The book is divided into two sections, one which defines cancer and its cure, and a second that explains how and why this knowledge was suppressed. Some complain that the first portion of the book is boring, excessively technical, and textbookish. This isn't Harry Potter or Danielle Steel! It is an explanation of complex biological processes. Amazing claims require stringent proof, and Griffin takes the time to make his case fastidiously, in terms laymen can understand. Griffin explains that cancer is caused by fast-growing quasi-embryonic cells which are used by the body in healing.
